

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A method of displaying calendar information comprising:
collapsing an active area input for a display screen to enlarge an effective display area of said display screen;

displaying a weekly view graphical image on a said effective display area of said display screen, wherein said weekly view graphical image comprises days of the week and appointment icons therein;

visually highlighting appointment icons in response to user navigation input;
in response to a user selection of a first highlighted appointment icon,
automatically displaying a preview window comprising details of said first highlighted appointment icon on said display screen, wherein said preview window is displayed simultaneously with said weekly view graphical image which remains user accessible while said preview window is open; and

removing said preview window in response to a user selection outside of said preview window while said preview window is open.

2. (Original) A method as described in Claim 1 wherein said user navigation input is obtained from a 5-way navigation tool.

3. (Original) A method as described in Claim 2 wherein said user selection is obtained from said 5-way navigation tool.
4. (Original) A method as described in Claim 3 wherein said 5-way navigation tool comprises a selection button and four cursor directional buttons.
5. (Original) A method as described in Claim 1 wherein said user input is obtained from tactile interaction with a digitizer of said display screen.
6. (Currently Amended) ~~A method as described in Claim 1 wherein~~
A method of displaying calendar information comprising:
displaying a weekly view graphical image on a display screen, said display screen
is switchable between a small display mode which is substantially square in shape and a
tall display mode which is substantially rectangular in shape, wherein said weekly view
graphical image comprises days of the week and appointment icons therein;
visually highlighting appointment icons in response to user navigation input;
in response to a user selection of a first highlighted appointment icon,
automatically displaying a preview window comprising details of said first highlighted
appointment icon on said display screen, wherein said preview window is displayed
simultaneously with said weekly view graphical image which remains user accessible
while said preview window is open; and
removing said preview window in response to a user selection outside of said
preview window while said preview window is open.

7. (Original) A method as described in Claim 1 further comprising, in response to a user navigation to a second highlighted appointment icon, automatically updating said preview window to display details of said second highlighted appointment icon on said display screen.

8. (Canceled).

9. (Original) A method as described in Claim 7 further comprising removing said preview window in response to a user selection while said preview window is open.

10. (Original) A method as described in Claim 4 wherein said visually highlighting comprises:

highlighting days of the week in response to left/right navigation; and
highlighting appointments within a highlighted day in response to up/down navigation.

11. (Currently Amended) A computer system comprising: memory coupled to a bus; a processor coupled to said bus; and a display screen coupled to said bus, wherein said memory comprises instructions for implementing a method of displaying calendar information, said method comprising:

collapsing an active area input area for said display screen to enlarge an effective display area of said display screen;

displaying a weekly view graphical image on a said effective display area of said
display screen, wherein said weekly view graphical image comprises days of the week
and appointment icons therein;

visually highlighting appointment icons in response to user navigation input;

in response to a user selection of a first highlighted appointment icon,
automatically displaying a preview window comprising details of said first highlighted
appointment icon on said display screen, wherein said preview window is displayed
simultaneously with said weekly view graphical image which remains user accessible
while said preview window is open; and

removing said preview window in response to a user selection outside of said
preview window while said preview window is open.

12. (Original) A computer system as described in Claim 11 further comprising a 5-way navigation tool for providing said user navigation input.
13. (Original) A computer system as described in Claim 12 wherein said 5-way navigation tool also provides said user selection.
14. (Original) A computer system as described in Claim 13 wherein said 5-way navigation tool comprises a selection button and four cursor directional buttons.

15. (Original) A computer system as described in Claim 11 wherein said display screen comprises a touch screen display and wherein said user input is obtained from tactile interaction with said touch screen display.

16. (Currently Amended) ~~A computer system as described in Claim 11 wherein~~
A computer system comprising: memory coupled to a bus; a processor coupled to
said bus; and a display screen coupled to said bus, wherein said memory comprises
instructions for implementing a method of displaying calendar information, said method
comprising:

displaying a weekly view graphical image on a display screen, said display screen
is switchable between a small display mode which is substantially square in shape and a
tall display mode which is substantially rectangular in shape, wherein said weekly view
graphical image comprises days of the week and appointment icons therein;

visually highlighting appointment icons in response to user navigation input;
in response to a user selection of a first highlighted appointment icon,
automatically displaying a preview window comprising details of said first highlighted
appointment icon on said display screen, wherein said preview window is displayed
simultaneously with said weekly view graphical image which remains user accessible
while said preview window is open; and

removing said preview window in response to a user selection outside of said
preview window while said preview window is open.

17. (Original) A computer system as described in Claim 11 wherein said method further comprises, in response to a user navigation to a second highlighted appointment icon, automatically updating said preview window to display details of said second highlighted appointment icon on said display screen.

18. (Canceled).

19. (Original) A computer system as described in Claim 17 wherein said method further comprises removing said preview window in response to a user selection while said preview window is open.

20. (Original) A computer system as described in Claim 14 wherein said visually highlighting comprises:

highlighting days of the week in response to left/right navigation; and
highlighting appointments within a highlighted day in response to up/down navigation.

21. (Canceled).

22. (Currently Amended) A method of displaying calendar information comprising:
collapsing an active input area for a display screen to enlarge an effective display area of said display screen;

displaying a monthly view graphical image on a said effective display area of said display screen, wherein said monthly view graphical image comprises days of the month and appointment icons therein;

visually highlighting days in response to user navigation input;

in response to a user selection of a first highlighted day, automatically displaying a preview window comprising details of appointments said first highlighted day on said display screen, wherein said preview window is displayed simultaneously with said monthly view graphical image which remains user accessible while said preview window is open; and

removing said preview window in response to a user selection outside of said preview window while said preview window is open.

23. (Original) A method as described in Claim 22 wherein said user navigation input is obtained from a 5-way navigation tool.

24. (Original) A method as described in Claim 23 wherein said user selection is obtained from said 5-way navigation tool.

25. (Original) A method as described in Claim 24 wherein said 5-way navigation tool comprises a selection button and four cursor directional buttons.

26. (Previously Presented) A method as described in Claim 22 wherein said user input is obtained from tactile interaction with a digitizer of said display screen.

27. (Currently Amended) ~~A method as described in Claim 22 wherein~~

A method of displaying calendar information comprising:
collapsing an active input area for a display screen to enlarge an effective display
area of said display screen
displaying a monthly view graphical image on a display screen, said display
screen is switchable between a small display mode which is substantially square in shape
and a tall display mode which is substantially rectangular in shape, wherein said monthly
view graphical image comprises days of the month and appointment icons therein;
visually highlighting days in response to user navigation input;
in response to a user selection of a first highlighted day, automatically displaying
a preview window comprising details of appointments said first highlighted day on said
display screen, wherein said preview window is displayed simultaneously with said
monthly view graphical image which remains user accessible while said preview window
is open; and
removing said preview window in response to a user selection outside of said
preview window while said preview window is open.

28. (Original) A method as described in Claim 22 further comprising, in response to a
user navigation to a second highlighted day, automatically updating said preview window
to display details of appointments of said second highlighted day on said display screen.

29. (Original) A method as described in Claim 22 further comprising displaying a full day view of said first highlighted day in response to a user selection provided said preview window is already open.

30. (Original) A method as described in Claim 28 further comprising displaying a full day view of said second highlighted day in response to a user selection provided said preview window is already open.

31. (Original) A method as described in Claim 25 wherein said visually highlighting comprises:

highlighting days of the month across a common row in response to left/right navigation; and

highlighting days of the month across a common column within a highlighted day in response to up/down navigation.

32. (Currently Amended) A computer system comprising: memory coupled to a bus; a processor coupled to said bus; and a display screen coupled to said bus, wherein said memory comprises instructions for implementing a method of displaying calendar information, said method comprising:

collapsing an active input area for a display screen to enlarge an effective display area of said display screen;

displaying a monthly view graphical image on said effective display area of said
display screen, wherein said monthly view graphical image comprises days of the month
and appointment icons therein;

visually highlighting days in response to a user navigation input;

in response to a user selection of a first highlighted day, automatically displaying
a preview window comprising details of appointments said first highlighted day on said
display screen, wherein said preview window is displayed simultaneously with said
monthly view graphical image which remains user accessible while said preview window
is open; and

removing said preview window in response to a user selection outside of said
preview window while said preview window is open.

33. (Original) A computer system as described in Claim 32 further comprising a 5-
way navigation tool and wherein said user navigation input is obtained from said 5-way
navigation tool.

34. (Original) A computer system as described in Claim 33 wherein said user
selection is obtained from said 5-way navigation tool.

35. (Original) A computer system as described in Claim 34 wherein said 5-way
navigation tool comprises a selection button and four cursor directional buttons.

36. (Original) A computer system as described in Claim 32 wherein said user input is obtained from tactile interaction with a digitizer of said display screen.

37. (Currently Amended) ~~A computer system as described in Claim 32 wherein~~

A computer system comprising: memory coupled to a bus; a processor coupled to said bus; and a display screen coupled to said bus, said display screen is switchable between a small display mode which is substantially square in shape and a tall display mode which is substantially rectangular in shape, wherein said memory comprises instructions for implementing a method of displaying calendar information, said method comprising:

displaying a monthly view graphical image on said display screen, wherein said monthly view graphical image comprises days of the month and appointment icons therein;

visually highlighting days in response to a user navigation input;
in response to a user selection of a first highlighted day, automatically displaying a preview window comprising details of appointments said first highlighted day on said display screen, wherein said preview window is displayed simultaneously with said monthly view graphical image which remains user accessible while said preview window is open; and

removing said preview window in response to a user selection outside of said preview window while said preview window is open.

38. (Original) A computer system as described in Claim 32 wherein said method further comprises, in response to a user navigation to a second highlighted day, automatically updating said preview window to display details of appointments of said second highlighted day on said display screen.

39. (Original) A computer system as described in Claim 32 wherein said method further comprises displaying a full day view of said first highlighted day in response to a user selection of said first highlighted day provided said preview window is already open.

40. (Original) A computer system as described in Claim 38 wherein said method further comprises displaying a full day view of said second highlighted day in response to a user selection of said second highlighted day provided said preview window is already open.

41. (Original) A computer system as described in Claim 35 wherein said visually highlighting comprises:

highlighting days of the month across a common row in response to left/right navigation; and

highlighting days of the month across a common column within a highlighted day in response to up/down navigation.
